DON'T LET THIS HAPPEN ON YOUR WATCH

TABLE SAW STOPS ON CONTACT WITH SKIN

Plan For Safety Success, Not Safety Failure

A table saw accident changes a worker's life forever. Insurance policies respond when safety plans fail. SawStop is always there, working to help ensure the success of your safety plan and ultimately the protection of your workers.

The Engineered Solution

SawStop is the ONLY saw that stops on contact with skin, and is the #1 table saw chosen by safety professionals across North America. When guarding and training fail, the SawStop saw stops the blade within 5 milliseconds of skin detection. Your employee, and your budget, are saved.
